

# One platform. Zero procurement headaches.

Procurement teams are under pressure to manage countless vendors, complex approval cycles, and growing compliance demands. With a secure, unified system like Deel, you can simplify the whole process, from a pre-vetted vendor to a streamlined payment process.

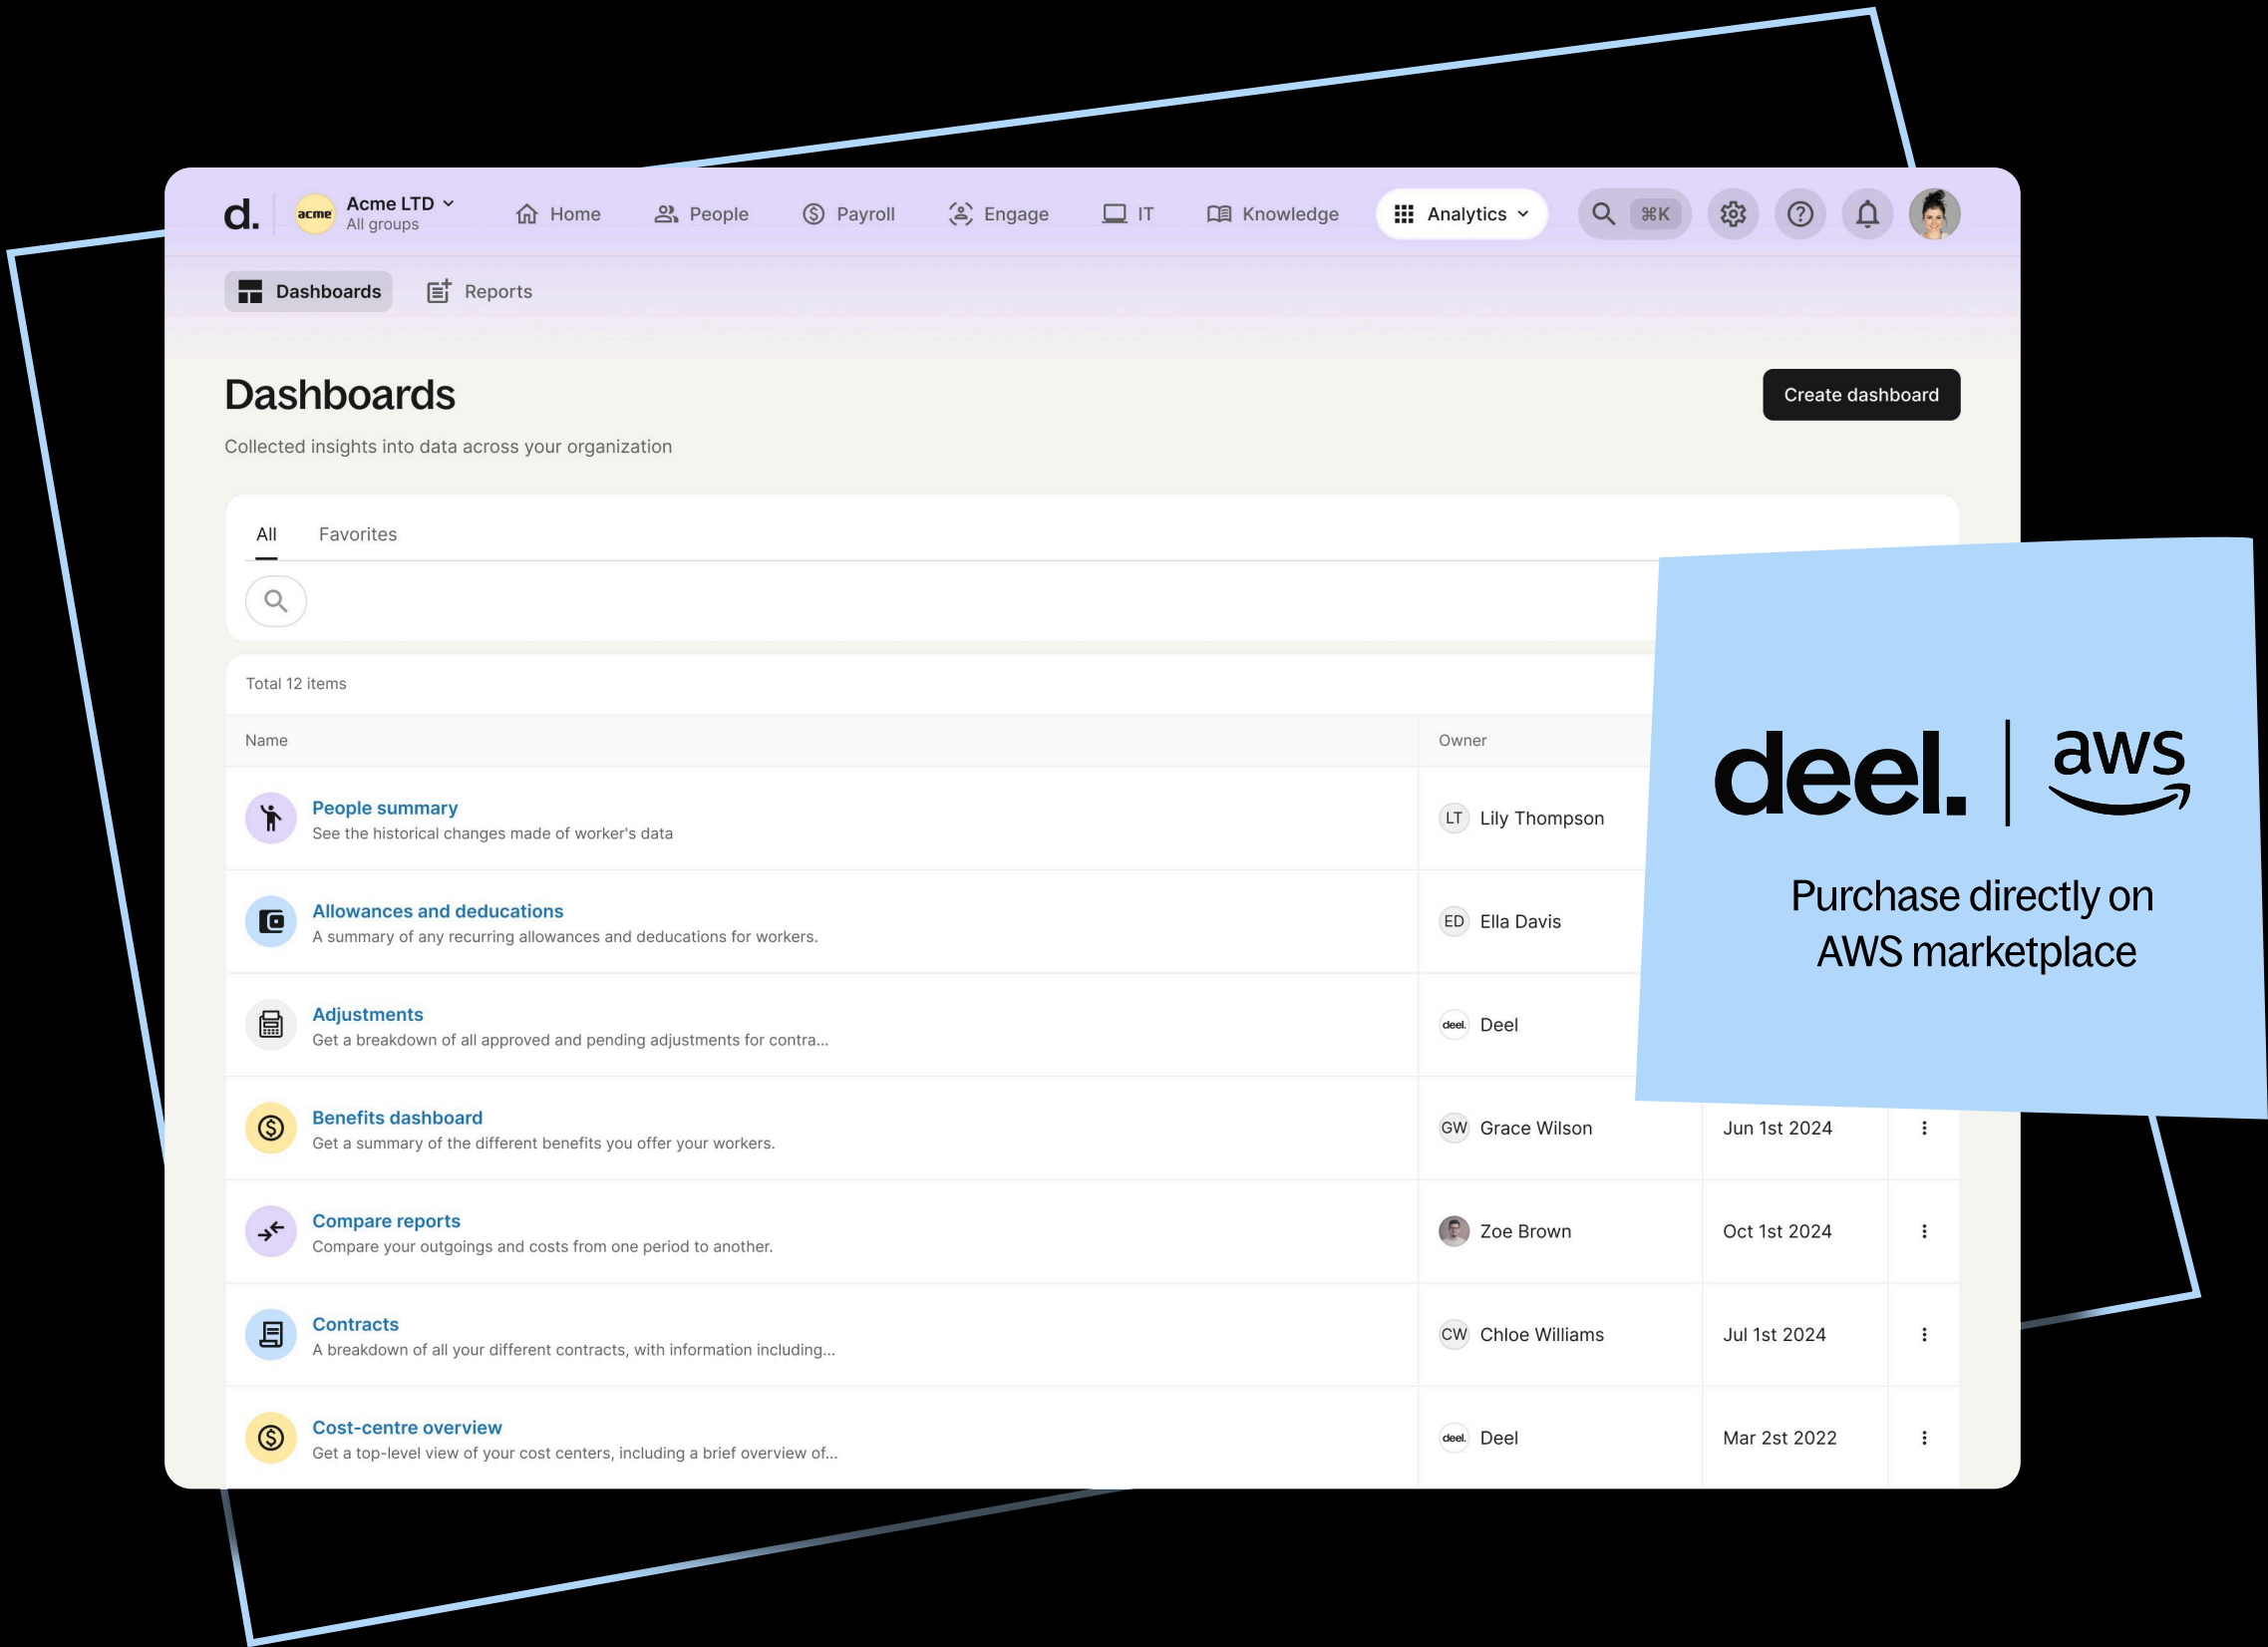

## One provider. Total consolidation.

Instead of managing multiple vendors, Deel consolidates every process into a single system. Fewer contracts, fewer renewals, and fewer hours spent on procurement, freeing your team to focus on strategic initiatives.

## Vetted and trusted through AWS Marketplace

Because Deel is available on AWS Marketplace, it has already been pre-vetted—no additional security or legal reviews required. This makes it faster and easier to integrate Deel into your existing tech stack.

### Simplified purchasing in just one click

Procurement shouldn't be complex. With Deel on AWS Marketplace, you can pay for services in a single transaction—no confusing billing cycles, just one streamlined payment process.

### Maximize your AWS investment

For teams already investing in AWS, purchasing through AWS Marketplace gives you the ability to burn down your committed AWS spend, helping you optimize budgets while simplifying procurement.

“Other providers are stuck in the past in the way their platforms are built and the way their customer service works. We wanted the elevated experience Deel provides.”
